

FIRE STATION #6

CATALOG OF PROPOSALS

1. 220 Designs
Manchaca, TX
Total Cost: \$124, 180

Overview:

The proposed artwork consists of a 7-foot stainless steel badge sculpture crafted from hand forged and textured stainless steel bar designed to be site-specific, harmonizing with its surroundings to create a unique and engaging work of art.

Variations and Customization:

- Scalability: This sculpture can be scaled up or down to fit site location for alternative visibility options.
- Color Options: The sculpture can be powder-coated in different colors, adding vibrancy and making the piece stand out in its surroundings.
- Lighting: If required, I can design and install lighting to highlight the artwork, pending further site details and an additional proposal.

Installation and Durability:

- Material and Fabrication: The sculpture will be constructed from brushed stainless steel, chosen for its ability to sparkle in daylight and reflect lights at night, creating a captivating visual effect. The fabrication time will be 4-6 months. Progress photos will be made to show progression.
- Maintenance: The brushed finish helps hide scratches from interaction, making the sculptures virtually maintenance-free. It will

extensive experience in metalworking, I am able to craft art that is not only visually appealing but also built to withstand the test of time.

Within my art, I employ subtle irony to present alternative viewpoints. For instance, I might design a textured steel bench that appears uncomfortable at first glance but is actually quite cozy to sit on. Alternatively, I might create oversized metal ants that invite viewers to explore their whimsical world. I believe that this approach resonates universally, even among individuals without a background in fine art appreciation. This inclusivity and accessibility are fundamental aspects of how I define public art and its purpose.

By incorporating these elements of thought-provoking concepts, meticulous craftsmanship, and a touch of irony, my aim is to enrich public spaces and encourage meaningful interactions among diverse audiences. I aspire to create public art that not only captivates but also challenges individuals, encouraging them to expand their perspectives and engage with art in a way that is both enjoyable and intellectually stimulating.

I have over 30 years of experience creating and installing complex architectural metalwork and public art. I am well versed in working with all members of the project and can deliver the project on time and on budget.

2. 900 North Studio / Alicia Eggert
Indianapolis, IN
Total Cost: \$160,547.22

Spacetime Continuum
Proposal Statement / Denton Fire Station #6

Alicia Eggert

My work gives material form to language and time, those powerful but invisible forces that shape our perception of reality. I have always gravitated toward language as a sculptural material, and I like to think I sculpt words the way other artists sculpt clay or wood. I draw inspiration from physics and philosophy, but I use simple, everyday words as points of entry into concepts that feel are beyond my intellectual grasp. These words are accessible to anyone who can read and understand the same language, making them an approachable medium through which complex ideas can be shared.

I believe we all need more opportunities in our everyday lives to reflect on the wonders of the world we live in and the role we play in it. So that is my pursuit — to make works of art that create opportunities to reflect on what is truly important. I've found working in public space to be the best environment in which to reach and inspire a broad and diverse audience. Public art allows me to present pressing issues in ways that feel personal and sincere in spaces that are familiar, inclusive, and ideal for audiences who might not otherwise get the opportunity to encounter them.

The project at Denton Fire Station #6 is particularly meaningful to me, because Denton is my home. It's where I live and work, and where I've chosen to raise my son. As a professor of Sculpture at the University of North Texas and a former member of Denton's Public Art Committee, I am committed to the creative growth of younger generations, and to contributing to the vibrant cultural atmosphere of the city. A public art commission would allow me the rare opportunity to give back to my hometown, my community, and my neighbors.

Spacetime Continuum encourages people to reflect on the present moment and our place within it, both individually and collectively. Installed near the fire station, where time is often measured in urgency and action, the sculpture will serve as a powerful reminder of the immediacy of "now"—a moment that is constantly becoming, never static. The word NOW is elongated in space, indicating the potential to extend and spiral endlessly outward and upward in opposite directions. This gesture suggests that the present is not isolated, but an unfolding extension of the past and a bridge into the future. The sculpture fosters mindfulness and invites Denton residents to consider the continuity of time, and how each moment is shaped through awareness, attention, and action.

The sculpture's title, Spacetime Continuum, references the concept from physics that space and time are not separate entities, but interconnected dimensions that form the fabric of the universe. This idea is echoed in the sculpture's form, which visualizes time not as a fixed point but as a flowing, physical presence. By giving this concept a material form, I invite people to experience it physically, in real space and time, where it can take on new meaning through the viewer's presence, movement, and changing point of view.

The generous budget would enable Spacetime Continuum to be fabricated with the highest quality, most durable, and beautiful materials at a scale capable of reaching and inspiring a broad public audience. The sculpture will be engineered to withstand extreme weather events, intense heat and sun, and those strong North Texas winds. The fabrication process is carefully planned from the bottom up, starting with a reinforced concrete plinth poured well-below ground level. A framework

of welded steel would provide the supporting inner structure and the external form sculpted in marine-grade fiberglass. UV-resistant paint and clear coating will ensure the sculpture looks in 20 years the same it did the day of installation.

Since 2021, I've worked closely with the City of Fort Worth and Public Art Manager Michelle Thomas Richardson on a large-scale outdoor sculpture for a traffic roundabout, titled *A Very Long Now*. The 30-foot-tall, \$320,000 sculpture is now complete and awaiting transportation, and I'm thrilled to begin installation with my team during the first week of July. This project has been a massive undertaking—from early design iterations to close collaboration with the curator, structural engineer, general contractors, material vendors, and the fabrication team at 900 North Studios. Throughout the process, I've had to learn the language of multiple construction disciplines, becoming familiar with new materials and procedures along the way. This experience, combined with my personal connection to the City of Denton, uniquely positions me to create a lasting, iconic artwork that honors and inspires both the city's firefighters and its residents.

If awarded the opportunity to create *Spacetime Continuum*, I would work closely with 900 North Studios to engineer, fabricate, and install the sculpture. Based in a 20,000-square-foot facility in the heart of Indianapolis, 900 North manages every phase of production, from project management and design to engineering, fabrication, and installation. They have successfully brought to life projects for municipalities, artists, architects, private clients, and developers around the world. With extensive experience executing large-scale sculptures with budgets approaching half a million dollars, I have full confidence in their ability to deliver exceptional results with precision, professionalism, and care.

Thank you for the opportunity to submit my proposal. I look forward to the possibility of contributing to this meaningful project.

Alicia Eggert

Kimball, MN
Total Cost: \$125,000

Artist Statement

At Brodin Studios, we believe public sculpture has the power to carry legacy, embody values, and forge a lasting emotional connection between a community and its heroes. For over 40 years, our studio has been devoted to telling the stories of real people through lifelike bronze sculptures—those who serve, protect, and uplift others in times of need.

Our work is rooted in respect for service and sacrifice. Every piece we create is guided by a deep sense of responsibility: to honor the truth of a uniform, the authenticity of gesture, and the soul of a story. We are drawn to commissions like Denton's because they share our commitment to preserving history through meaningful visual narratives.

Through enduring bronze, we strive to create not just a sculpture, but a landmark—one that honors Denton's firefighters while connecting with all who pass by. At Brodin Studios, we strive for more than art; it's a legacy, made visible.

"TIME SPIRE" FIRE STATION #6 DENTON TX MONUMENTAL PARAMETRIC SCULPTURE PROJECT PROPOSAL BY CÉSAR HENAO

Declarative Preamble

I am honored to present my proposal for the creation of *Time Spire*, an outdoor 3D artwork conceived as a monument to vigilance, permanence, and elevation, standing as a defining landmark at Fire Station #6 in Denton, Texas. Through its ascending parametric form, *Time Spire* embodies the continuous presence of first responders, highlighting their dedication to safeguarding the community.

Following the conceptual exploration initiated with *Luminous Watch*, *Time Spire* emerges as a unique vision, responding to the distinct mission and expectations of Fire Station #6. While *Luminous Watch* was designed as a beacon of readiness, *Time Spire* focuses on the passage of time, the rhythm of service, and the unwavering continuity of protection, reinforcing the cyclical nature of vigilance.

I deeply appreciate the opportunity to participate in this Bid Procurement Process, and I am fully committed to delivering an artwork that aligns with the civic identity of Denton. My expertise in large-scale public installations, combined with precise engineering and material innovation, ensures a seamless execution of this commission.

Project Overview

With its 365 stainless steel tubes, *Time Spire* is a visual chronicle of vigilance, symbolizing the daily dedication of first responders throughout the year. Its ascending cylindrical structure, crowned by a 55° inclined cut, interacts with sunlight to generate shifting shadows, reinforcing its role as a time marker within the station's architectural presence.

Production and Shipping

The sculpture will be fabricated at a specialized studio in Poland, where I have successfully completed similar large-scale commissions. The studio is equipped with state-of-the-art facilities and a highly skilled production team, ensuring precision execution. Throughout the Bid Procurement Process, I have carefully examined transportation constraints, structural dimensions, and budgetary requirements to optimize the design and logistics of *Time Spire*. The shipping phase will span approximately two months, allowing ample time for customs clearance and site preparation before installation.

Commitment to Excellence

I am dedicated to delivering an artwork that not only meets but exceeds expectations. My experience in monumental sculptural works allows me to address technical, aesthetic, and material standards while ensuring long-term sustainability for the installation. With a well-defined execution timeline, I am fully committed to achieving the October 2026 completion date, ensuring that *Time Spire* becomes an integral landmark in Denton's visual and civic landscape. I am confident that *Time Spire* will stand as a symbol of endurance, protection, and pride, offering an impactful tribute to the firefighters of Denton while enriching the city's cultural identity.

Thank you for considering my proposal as part of this Bid Procurement Process. I look forward to collaborating with the City of Denton to bring this vision to life.

"TIME SPIRE" FIRE STATION #6 DENTON TX

MONUMENTAL PARAMETRIC SCULPTURE PROJECT PROPOSAL BY CÉSAR HENAO

Introduction

"TIME SPIRE" – A Monument to Vigilance at Fire Station #6, Denton

Fire Station #6 in Denton, Texas, stands as a pillar of permanence, embodying the unwavering vigilance of first responders. Day after day, firefighters dedicate themselves to continuous protection, ensuring the safety and well-being of the community. Time Spire was conceived to materialize this constancy of service, integrating time, elevation, and resilience into a singular sculptural form.

More than a visual landmark, this monumental 3D artwork embodies the watchful presence and enduring commitment of firefighters. Its ascending parametric composition, forged from 365 stainless steel tubes, reflects the cycle of time, symbolizing the passage of days and the perpetual rhythm of duty. Through its light interaction and evolving shadows, the sculpture reinforces the idea that vigilance is not static—it is ever-present, adapting, and defining the essence of service.

Where Luminous Watch stood as a beacon of readiness, Time Spire establishes continuity, celebrating perseverance and the relentless march of time. This proposal details its vision, technical realization, and integration into Denton's civic landscape.

A pillar of time, sculpted in steel, forged in vigilance, and standing in unbroken continuity.

DESCRIPTION OF THE ARTWORK

Title: TIME SPIRE

Artist: César Henao

Medium: Stainless Steel L316

Dimensions: 19.7 feet Height (6 meters)

Base Width: 7.9 feet (2.40 meters)

Structure: 365 parametric stainless steel L316 tubes of 2 inches (5 cm) diameter each

Artistic & Conceptual Overview

TIME SPIRE is a monumental parametric sculpture conceived as a pillar of vigilance, permanence, and elevation, marking the presence of Fire Station #6 in Denton, Texas. Through its ascending cylindrical formation, the work symbolizes the continuity of service, embodying the rhythm of time and the daily dedication of first responders..

Each of the 365 extruded steel tubes represents a day in the cycle of vigilance, forming a structural calendar in motion. The upper portion of the sculpture, inclined at 55°, interacts dynamically with light, casting an evolving circular shadow—a temporal marker akin to a sundial, reinforcing the passage of time.

Material & Structural Features

Parametric Composition: The arrangement of tubes follows a precisely calculated distribution, generating fluidity and density within the form.

Polished Stainless Steel Finish: The truncated upper edge ensures that the sculpture projects a distinct circular shadow, evolving with the sun's movement.

Shadow Projection: A mirror-finished stainless steel band 19.7 inches (wide), x 1.6 inches (thick) encircles the base, capturing light reflections, emphasizing motion, resilience, and transformation.

Durability & Site Integration: Fabricated in weather-resistant L316 stainless steel, the structure is designed for long-term stability with minimal maintenance.

Symbolism & Community Interaction

A Pillar of Time: *TIME SPIRE* materializes 365 days of service, embodying the endurance of firefighters in their unbroken commitment.

A Landmark of Vigilance: Standing at Fire Station #6, the sculpture is a visual anchor, reinforcing the sense of protection and permanence.

Light & Time Dialogue: The interplay of shadows and reflections transforms the artwork into an active, evolving presence within its environment.

By embodying the rhythm of time and the endurance of service, *TIME SPIRE* creates a landmark that reflects permanence and vigilance in the heart of Denton. The interplay of its parametric structure and evolving shadows establishes a visual chronicle of resilience, reinforcing the firefighters' continuous presence. As Luminous Watch the project for Fire Station #5, captured the moment of activation, *TIME SPIRE* expands the narrative, expressing constancy, elevation, and the cyclical nature of protection.

5. Christine Sanders
Denton, TX
Total Cost: \$117,000

"Eternal 6"

This proposal is for the artwork to accompany the new Fire Station 6 "The Bull Pen" on Teasley Ln. in Denton Texas. *Eternal 6* is a sculpture and mural installation designed to honor the values and sacrifices represented by the Bull Pen Station and the community it serves. The central feature is a striking "eternal flame" shaped as a 6- a symbol of both continuous remembrance and the identity of the station, the sculpture anchors the space both physically and symbolically. The mural behind the sculpture is a visual backdrop reflecting the, movement, warmth, and strength tying into the theme of the eternal service. On the ground, in the concrete are the words, Honor, Bravery, Courage, and Dedication together with the zeroscaping provide harmony to the entire space and amplify the message and values of those who serve and protect at "The Bull Pen" Station 6

Artist: Christine Sanders

Location: Denton Fire Station 6, Denton Texas

Sculpture Title: *Eternal 6*

artistxine@yahoo.com

Christine Sanders Artist Statement Proposal for Denton Fire Station 6 Public Art Installation

Denton Fire Station 6, affectionately known as "The Bull Pen," sits just across from my neighborhood and has been a meaningful part of my daily life for the past 24 years. More than just a firehouse, it's a place of pride and belonging—a home away from home for the brave men and women who serve our city. With this project, my aim is to create a meaningful tribute to those who have served and continue to serve at Station 6, capturing their spirit and honoring their legacy.

The Eternal Flame is a powerful symbol in the firefighting community—representing honor, remembrance, and unwavering service. My proposed sculpture, titled *Eternal 6*, transforms the number 6 into an eternal flame crafted from Core 10 steel. A small, continuously lit bulb will glow at its center, and at night, carefully placed spotlights will animate the sculpture, creating a gentle, dancing light.

Behind the sculpture, a bold mural will act as a visual landmark for Station 6. It will feature two key images: the firefighter's American flag and a bull, accompanied by the "Bull Pen" banner. Rendered in black, white, and red, the mural's aesthetic will be clean and striking—providing a powerful backdrop to the *Eternal 6* sculpture.

My work is always community-focused, and this piece is no exception. I consulted with Station 6 firefighters, incorporating elements they personally take pride in. Their voices helped shape the vision. The surrounding space is also part of the art—in the sidewalk will be the words Honor, Bravery, Dedication, and Courage, encircling the sculpture and mural.

The site will be landscaped using a zeroscape of crushed white granite, rust-colored boulders to echo the sculpture's patina, and a few native evergreen sages to provide color and life. Hidden spotlights will be tucked into the boulders to maintain a natural look. A custom bench, with legs shaped like the number 6, will sit nearby as an inviting spot for reflection.

This installation is more than a piece of art—it's a heartfelt tribute. It celebrates the strength, pride, and commitment of Denton's Fire Station 6 and creates a lasting symbol of appreciation from the community it so faithfully protects.

artistxine@yahoo.com

Eternal 6 and The Bull Pen

- The "6" flame is 3' wide 4' tall on a 2' diameter cylinder.
- The metal base is a 4' diameter cylinder with a beveled top that is 4' high at the highest height and 3' high at the short end of the slope. The slope has the fire fighter shield on it. The base is hollow and powder coated.
- This all sits on a concrete base that is 6' deep and 16' square. The words, Honor, Bravery, Courage, and Dedication will be on plaques embedded in the concrete.

- The *Eternal 6* Flame can have layered steel pieces giving it more of a flame look and will be powder coated in red.
- There will be electric running through the center of the sculpture for a light that will be flame looking and will stay on 24/7 to give the eternal flame glow in the center of the 6.
- Additional spotlights will be placed, hidden in the boulders of the landscape to shine on the mural and the sculpture at night. The spotlights on the *Eternal 6* can be special SFX light that have movement of red light that will give the flame a flicker at night.
- Final shape of sidewalks and landscape boarder will be determined with the collaboration of the Architects and landscapers of the station build to ensure a cohesive look.

artistxine@yahoo.com

Eternal 6 and The Bull Pen

- The *Bull Pen* mural is approximately 16' high by 22' wide. The final size will be determined when the wall is complete and the full uninterrupted space can be seen.
- The banner for Fire Station 6, will be the width of the windows on the side of the building or approximately 9' wide by 7' high.
- The sculpture will be positioned so that it will be seen between the bull and the banner from the entrance of the fire station or the corner of Teasley and Hunter's creek rd.
- There will be a bench that goes in harmony with the aesthetic of the sculpture and mural allowing for sitting for a moment of reflection.

- Landscaping will be a zeroscape, with crushed white granite larger gray stones and large rust colored boulders. Boulders will hide spotlights and reflect the color of the patina on the sculpture.
- A few sage bushes and native plants for a pop of color and life.
- The color scheme is monochromatic, gray, black, and white with red. Accents of rust color in the metal patina and the boulders will give this area a striking yet simple and clean look. The bold image of the bull and the fire fighter's flag show the strength of the station and those who serve there, and the *Eternal 6* keeps the reverence and sincerity of the space those who pass by or visit.

artistxine@yahoo.com

Project Plans

Budget

• Mural: Cost of labor, materials, and rental equipment.	\$20,000.00
• Sculpture: Cost of core 10 Steel, powder coating, patina, welding and installation labor.	\$30,000.00
• Concrete: Cost of sidewalks and structural base.	\$5,000.00
• Landscape: Materials and labor.	\$20,000.00
• Park Bench:	\$4,000.00
• Architectural and Engineering fees.	\$5,000.00
• Electrical and lighting	\$8,000.00
• electrical Engineer	\$3,000.00
• Artist 3D rendering (Chris Goodwyn)	\$2,000.00
• Artist fee for project	\$20,000.00

Time Line

This project scheduled to be completed in 2026 when the construction of the Fire Station 6 on Teasley Ln. is completed, and the landscaping is beginning, before the open of the station. All work for the *Eternal 6*, and the Bull Pen mural with landscaping will be completed prior to the grand opening of the station.

Maintenance

There is no maintenance need for the mural. The zeroscape landscaping will only need an occasional check for weeds or trash pick up that may blow in. The *Eternal 6* has lighting and may need a change of bulbs every couple of years, or replacement bulbs incase of hail damage.

cost

\$117,000. is the total cost of the sculpture, "Eternal 6" ad The "Bull Pen" mural. This includes the cost of supplies labor and Engineer fees.

6. Christopher Fennell
Birmingham, AL
Total Cost: \$150,000

Artist Statement

Artist-Engineer Christopher Fennell has built sculpture in 27 states, his sculpture appearing in movies, River Thief and Damnation, and in magazines such as AIT, Sculpture and Make. The Green Sculptor is known for his vortexes of everyday objects made into colossal sculpture inspired by nature. He uses local history and recycled materials to create site-specific art. The artist takes advantage of egress to deliver a time based experience of discovery. At a distance the viewer sees an identifiable object: a 24 foot tall wave, a 26 foot tall bean sprout, a 24 foot tall fireball, then on closer inspection the viewer discovers the material of the sculptures: Canoes, little red wagons or fire ladders. The viewer is then visually encouraged to walk through the sculpture or sit down on one of its benches; in doing so the viewer becomes part of the sculpture.

Proposed Sculpture

For the Fire Station Number Six, Christopher Fennell proposes sculpting “Water Fire Ball” a fireball of decommissioned fire ladders held aloft by a wave of pipe. In the same way that the artist sculpted a fireball of decommissioned fire ladders for Allen’s Number Five fire station with a base of train rails, he would like to do a sculpture once again using decommissioned fire ladders from Denton, but held aloft by a wave of pipe. Christopher has built many waves of pipe including the *Industrial Pipe Wave* that won Phoenix Time Best Installation of 2022. Residing in Denton you might know Fennell’s latest installation *Barnyard Promenade* along 3 mi of North Beach Street where he installed twelve working weather vanes where the animals are made out of locally recycled material. To illuminate the Denton installation he will include red and orange LED floodlights that will light up the fireball at night- so that as you drive by the sculpture the different facets of the ladders will reflect the two colors of light differently, causing the fire ball to appear to flicker red and orange.

Fennell will build a series of models to develop the concept before construction.

For a \$1000 fee Christopher will build a scale model of the proposed sculpture to better convey what the sculpture will look like.

Budget

Donated Decommissioned Fire Ladders	\$0
Shipping Ladders to Studio	\$1900
Wiring and Lighting	\$2,800
Structural Engineering Drawings	\$6,000
Pipe bending	\$8,000
5” steel pipe for water droplet	\$6,800
1” Base plates	\$3,100
1/2" Steel Plate for tabs	\$670
Insurance	\$3,515
Consumables	\$2,600
Labor to build sculpture	\$64,485
Sand Blasting	\$4,000
Lumber for scaffolding	\$1,230
Fasteners	\$1,700
Epoxy Paint and Urethane	\$2,300
Welding Supplies	\$1,700
Rental bucket truck for installation	\$1,600
Rental telehandler for installation	\$2,100
Transportation of sculpture to site	\$7,000
Artist Fee	\$6,800
Travel Expenses	\$3,000
Building Permit	\$700
Labor to Install Sculpture	\$18,000
Total	\$150,000

7. Sujin Lim / Cloud Study LLC
Brooklyn, NY
Total Cost: \$200,000

Sujin Lim

Dwell in Clouds

Materials

Stainless Steel and Urethane Painted Aluminum

Approximate Dimensions

Approx. 5' x 5' x 20'

Dwell in Clouds is a 20 foot tall sculptural installation shaped like both a house and a cloud. It serves as a powerful metaphor for home, journey, and limitless aspirations, evoking the emotional landscape of those who dedicate their lives to public service. Inspired by the strength and quiet heroism of firefighters, the sculpture symbolizes both protection and elevation: the grounded security of a house and the ethereal hopefulness of a cloud.

Positioned prominently along Teasley Lane at the eastern edge of the Fire Station #6 site, the sculpture will function as a visual and symbolic beacon, welcoming passersby and station personnel alike. Fabricated in durable materials such as stainless steel or urethane painted aluminum, *Dwell in Clouds* will offer striking visibility during the day and a gentle luminescence at night through a subtle internal lighting system. The lighting may be programmed to softly glow in response to emergency call activation, acknowledging the fire station's active service in real time. In moments of silence, it will remain a contemplative object; in moments of emergency, a quiet signal of action and care.

The cloud form becomes a skyward symbol of shared care, mirroring the calm presence of first responders and the suspended stillness before a call to action. The house shape references the fire station itself as a second home, a place where courage is nurtured and selflessness becomes daily practice. Together, these forms reflect the dual roles firefighters hold in our communities as steadfast, grounded protectors and as aspirational figures who rise to every moment of need.

The materials used, brushed stainless steel or urethane painted aluminum, offer both strength and reflectivity. The mirrored surface will subtly reflect the sky, the landscape, and the people around it, reminding viewers of their connection to those who serve. Just as firefighters reflect the needs of their communities, the sculpture reflects back the environment and people it stands among.

The installation will be situated within a landscaped zone near the station, offering a space for community gathering and quiet appreciation. This site specific positioning reinforces the sculpture's role not only as a landmark but as a point of contemplation and connection.

As one of the first public artworks commissioned through Denton's 2023 Bond Program, *Dwell in Clouds* aspires to set a new standard for community public art, balancing aesthetic impact with deep thematic resonance. It invites every viewer to reflect on memory, aspiration, and the invisible acts of heroism that shape our daily lives.

Technical Specifications

- **Durability:** Engineered to withstand outdoor conditions, including wind, rain, and UV exposure. Corrosion-resistant coatings will be applied to extend longevity.
- **Lighting System:** Motion-activated or solar-powered LEDs embedded within the cloud structure to enhance visibility while maintaining energy efficiency.

Maintenance

Dwell in Clouds is designed with longevity and durability in mind, using materials that are well suited for permanent outdoor display. The sculpture's primary structure will be constructed from either brushed stainless steel or urethane painted aluminum, both of which are resistant to corrosion, fading, and environmental damage. These materials require minimal upkeep and are commonly used in public art settings for their low maintenance needs and long term performance.

Routine maintenance will primarily consist of visual inspections and basic surface cleaning. It is recommended that city staff conduct a visual check at least once a year, especially after significant weather events, to identify any debris buildup, bird droppings, or surface wear. Once a year, preferably in spring and fall, the sculpture should be cleaned with a mild detergent diluted in water, using a soft cloth or sponge to avoid scratching the surface. All fasteners, seams, and welded joints should be reviewed at the same time, along with a functional test of the internal lighting system if installed. Lighting elements will be housed in waterproof, UV resistant enclosures and are expected to last over 50000 hours before requiring replacement.

8. Daniel Borup
Shelley, Idaho
Total Cost: \$200,000

To the Selection Committee

Thank you for this opportunity to submit a proposal for Fire Station #5 and #6. I am excited because I feel my work and expertise can greatly benefit this location and community. I am submitting the same design for both fire stations and would be honored to create this sculpture for either of them. I am a traditional representational sculptor. Bronze will be a great material for this project as it is strong and durable and lasts well in any kind of weather. It is also a classic material for public art and holds up extremely well to viewer interaction

My design depicts two fire fighters in action, creating a dynamic and emotional piece. One spraying the fire hose and the other next on the hose line helps to stabilize. These fire fighters are fully dressed in their turnout gear including the masks. Because of this, they will not be viewed as fire fighters representing any specific gender or ethnicity but rather as courageous fire fighters that the viewer can freely interpret as they wish. These firefighters are moving up stairs which helps to strengthen the sense of action and movement. Visually the hose also guides the viewer through the piece as it wraps around the stairs and directs the viewer to the plaque of the Maltese Cross.

In my proposal this Maltese cross is just a generic one that can be found at many fire departments. I would be happy to make this plaque more specific to Denton with some unique wording and imagery. This plaque is a great opportunity for the committee to help make this piece a memorial specific to Denton. These changes can be decided with help from the committee. This plaque will be two feet tall and wide, making it large enough to be seen from the road from passing cars. This sculpture will be cast in bronze and securely fastened to the concrete pedestal. Lighting will be installed to light it up at night.

The large pedestal, the two figures, the fire hose and the plaque give the piece a monumental impression. All of these elements combined can be quite costly. In order to stay in budget I will be reusing the molds from a piece I have already created for Fire Station #6 in Meridian Idaho. This piece is an edition piece and I have the rights to use this piece again for this memorial in Denton. By reusing these molds I am able to save a little time and money to stay within budget. It also gives you the benefit of being able to see exactly what part of the sculpture will look like when it is installed. I will be changing the helmet patch to be specific to the Denton Fire Department, but all else about this sculpture will remain the same. The second figure will be sculpted to match this first piece stylistically so the entire piece harmonizes.

I have experience with several Public Works as evidenced in my resume. I have also been a finalist for various public art sculptures and have created in-depth proposals with renderings, scale models, and itemized budgets. Working with stakeholders, I have created public art for Libraries, Parks, Roundabouts, Schools, City Halls, Fire Stations, and Police Stations. Each piece has been created on time and within budget.

Aiming to convey the goals of each selection committee, I am willing to hear what preferences they have and adapt my design as necessary. I am eager to use my experience and expertise to create a proposal and ultimately see my sculpture become a reality. Thank you for taking the time to consider my application. I look forward to hearing from you.

Sincerely,

Daniel Borup

Denton Fire Fighter Memorial Model

Denton Fire Fighter Memorial Model With Measurements

Each of my projects have been completed on time and within budget.

Timeline

June, 2025

- Agreement signed.
- Amateur fabrication begins.

June 2025 - January 2026

- Sculpting
- I will be in touch periodically about the sculpting progress.

January, 2026

- Clay sculpting finished.
- Photos sent in for approval.

February, 2026

- Deliver Sculpture to Foundry.

July, 2026

- Receive sculpture from Foundry.

July, 2026

- Sculpture Installation.

Budget

Artist Design Fee	\$30,000.00
Labor	\$70,000.00
Foundry/Bronzing	\$61,000.00
Clay	\$500.00
Amateur Fabrication	\$500.00
Misc Supplies	\$1,000.00
Travel & Shipping	\$4,000.00
Contingency	\$15,000.00
Insurance	\$1,000.00
Engineer Fee	\$1,000.00
Installation	\$1,000.00
Pedestal and Lighting	\$15,000.00
Total:	\$200000.00

9. Vito Di Bari/Di Bari & Associates
Miami, FL
Total Cost: \$135,000

Dear Selection Committee,

I am honored to submit my proposal for the sculptural art installation at Fire Station 6. *Guardian of Hope* reflects and honors the City of Denton's call for installations that celebrate heroism, selflessness, and the rich history of firefighting in Texas and the United States, while incorporating an active lighting component responsive to emergency calls.

Guardian of Hope is a vibrant, large-scale sculptural panels combination anchored on a simple concrete base. The artwork captures a profoundly emotional scene: a firefighter, wearing a helmet marked with the number 6 — a direct tribute to Fire Station 6 — cradles a small child in his arms. This depiction powerfully symbolizes rescue, protection, and the deep compassion inherent in the firefighter's mission.

The figures are framed against a large circular backdrop, laser-cut to depict dynamic, stylized flames in tones of orange and yellow, representing both the danger firefighters face and the courage required to confront it. The sculpture is designed in layered, relief style, giving it a strong three-dimensional presence. Its vivid color palette — bold reds, blues, oranges, and yellows — evokes the energy of firefighting, the spirit of Texas, and American patriotism.

Material and Construction:

- The sculpture is made of laser cut mild steel layers.
- The layered design creates visual dynamism, producing striking shadow and light effects both during the day and at night.
- The sculpture is anchored to a simple, clean concrete base for structural integrity and aesthetic simplicity.

Color and Lighting Concept:

- During daytime, the firefighter and child are rendered in bright blue, white and red tones - a color palette that represents Texas and the USA.
- At night under normal conditions, the sculpture is softly illuminated: the firefighter and child glow in calm blue hues, while the flame background emits a warm, gentle light, symbolizing the balance between safety and danger.
- During emergency calls, the sculpture's internal lighting responds dynamically: the flames intensify to vivid yellow and red tones, creating a dramatic and urgent visual signal that honors the firefighters' swift action in real time.

Lighting System:

- Discreet spotlights are integrated at the base of the sculpture to provide even, dramatic illumination at night.

- The lighting control system is synchronized with the station's emergency call system, ensuring real-time visual response to emergency activations.
- The light fixtures will simulate the movement of the flames, adding dynamism and drama to the scene. Here an example, in our case the color will always be orange - <https://www.youtube.com/shorts/dzYy-9Wgb1k>

Artistic and Community Alignment:

Guardian of Hope not only captures the selfless spirit of first responders but also serves as a living tribute to the history and future of firefighting in Texas and the United States. Through its emotive imagery, dynamic color interplay, and interactive lighting, the piece will stand as a lasting symbol of bravery, compassion, and community resilience at Fire Station 6.

Maintenance:

The sculpture will be made of mild steel, painted with industrial direct-to-metal enamel paint, protecting it from any kind of weather conditions. It will require minimal maintenance, that can be performed by non-artists (public work employees), see more details in the maintenance and conservation plan attached to this application.

It would be an honor to create a piece that stands as a beacon of inspiration for the City of Denton, its citizens, and its brave first responders at Fire Station 6.

Thank you for your thoughtful consideration.

Sincerely,

Vito Di Bari

A handwritten signature in blue ink, appearing to read 'Vito Di Bari', with a horizontal line extending to the left.

ROM (Rough of order of magnitude pricing)

The project budgets listed in the following pages are informal cost estimates provided for early phase planning and budgeting purposes only.

ROM pricing must be finalized after proper engineering, costing and planning have been executed.

ITEM DESCRIPTION	COST
Artist Design and Project Management Fee (10%)	13,500.00 USD
Fabrication (45%)	60,750.00 USD
Installation (20%)*	27,000.00 USD
Professional Consultant Fees (10%)	13,500.00 USD
Insurance, Permits, Legal, Accounting, T&A, Quota of Overheads (10%)	13,500.00 USD
Contingency (5%)	6,750.00 USD
	TOTAL
	135,000.00 USD

**Access to electricity for night time illumination shall be provided by the city*

Maintenance and conservation plan

Task	Frequency	Materials	Expertise Level	Protocol
Remove debris	As needed during landscaping	Leaf blower	Technician or Groundskeeper	Use a leaf blower to remove all debris from the sculpture and base during routine landscaping (ex: plants, insects, garbage, etc.)
Wash	Twice yearly	Boom/scissor lift Hoses (not power washers) Buckets Orvus Non-Ionic Surfactant Sponges & soft-bristled brushes	Technician or Groundskeeper	1. Rinse the sculpture & concrete pad with water using standard-pressure hoses (not a power washer) 2. Scrub the sculpture & concrete pad with an Orvus and water solution mixed in a bucket at a 1 tbs : 1 gallon ratio 3. Rinse the sculpture & concrete pad with water using standard-pressure hoses (not a power washer) thoroughly to remove all suds and grime 4. Repeat as necessary to remove all grime, debris, etc. <i>Avoid using any abrasive cleaning agents or materials on the painted surface (such as steel wool or Scotchbrite)</i>
Condition Inspection	Once yearly	Boom/scissor lift	Technician or Groundskeeper	1. Inspect the sculpture overall for any structural or surface damage 2. Inspect for any scratches, dings, or other losses to the coating and/or paint layers
Spot apply paint & coating losses	Once Yearly	400-800 grit wet sandpaper paint (listed above)	Conservator/ experienced paint applicator	1. If losses to the coating and/or paint layers are observed, spot apply paint and/or coating to ensure the metal is protected. Prep the area by wet sanding with a 400-800 grit wet sandpaper before re-application
Corrosion mitigation	As needed	n/a (consult conservator)	Conservator	<i>If any corrosion products (such as rust) are observed, immediately consult a conservator for corrosion mitigation and spot re-application of paint and coating.</i>
Full re-paint & re-coat	As needed (~15 – 20 years after install)	400-800 grit wet sandpaper paint (listed above)	Conservator/ experienced paint applicator	<i>Eventually the coating and paint layers will fail, leading to flaking, fading, and loss. When this is observed, perform a full re-paint and re-coat.</i>

Tyler, TX
Total Cost: \$186,200

STATUE DESIGN

Initial Statue Design and Concept Art

Our design is bold, inspiring, and created to immediately capture attention. With fire elements, the sculpture honors the bravery and sacrifice of all firefighters. We are happy to provide a second design, but please note that concepts normally take weeks to develop, and additional time will be needed to ensure the same level of detail and impact. We will happily modify the final concept to best reflect your vision.

YOUR PROJECT

BUDGET

FIRE STATION #6

Deana Stevens
Go Wild Fabrication and Welding, LLC
6442 Nine Mile Bridge Rd.
Fort Worth, TX 76135
April 8, 2025

Parks and Recreation Department
901 Texas St.
Denton, Texas 76209

Parks and Recreation Department,

As a diverse artistic team and co-owners of Go Wild Fabrication and Welding, LLC, we are excited to submit our proposal for the Fire Station #6 public art opportunity. With a background that blends large-scale sculpture, graphic design, and structural steel fabrication, we create work that honors community, resilience, and craftsmanship—values that align deeply with the spirit of fire service.

We were so excited about this opportunity that we are submitting three different design ideas for consideration. Each concept reflects our creative vision and commitment to celebrating the bravery of first responders and the strength of the community they serve. We wanted to provide a range of options to inspire the space and ensure a meaningful connection to the Fire Station #6 location.

Why choose us? Because we don't just design—we fabricate and install the artwork ourselves. Go Wild Fabrication and Welding, LLC is a fully equipped shop with all the machinery and tools necessary to build the sculpture in-house. We even have a structural engineer on staff, which allows us to handle engineering needs quickly and make adjustments on the fly. By keeping the entire process under one roof, we eliminate the delays and complications that often come from outsourcing to multiple vendors—saving time, cost, and stress.

Thank you for considering our proposal. We have included all required materials, including visuals of past work and a detailed project concept. We would be honored to contribute to this meaningful space and welcome the opportunity to further discuss our ideas with your team.

Sincerely,
Deana Stevens

Art Garcia

LETTER OF INTEREST

City of Denton
Denton - Purchasing
901-B Texas Street
Denton, TX 76209

Fire Station 6
RFP-8774

June 30, 2024

Members of the Art Selection Committee,

This submission is presented on behalf of Art Garcia, in regard to the opportunity to create an original unique artwork for Denton Fire Station 6 to be completed and installed by October, 2026 with an all-inclusive budget total of \$200,000.

As Lead Artist for Graphic Content, Inc. Garcia has more than 35 years of experience creating innovative, sight specific works. Graphic Content, Inc. President Art Garcia is deemed to have the experience and expertise in public art and qualified to provide the services required by municipalities and their respective Public Art Committees and Institutions. Including but not limited to insurance coverage, consulting, permitting, zoning, environmental, historic or other policies and ordinances.

Like a fingerprint, every community has its own cultural, environmental or spiritual identity. This inspiration is essential to Garcia's work. With research and a strong desire to establish a visual dialog with the community, public art projects provide an iconic representation, resulting in civic pride and inspiring interaction — a sense of being. Most meaningful are the intangible connections the object makes with the viewer and the community in which they exist, encouraging both gathering and place making.

Zarape, 2018, for Victory Forest Community Center in Fort Worth, Texas, speaks to this process. Abstract whimsical profiles represent community members through a traditional Mexican sarape. *Seventh*, 2010, speak to the unsung heroes of the community while the Seventh Line was in service. Both projects are examples of an approach applied to Fire Station 6.

In addition to creating sculpture, Garcia has experience producing artwork for Fire Stations which speak to their communities. A professor of art and sculpture, his work has been published in the United States and Europe. In 1998, he founded Graphic Content to support private, public and commercial endeavors. A teaching instructor with the National Center for Construction Education and Research through Dallas College, Garcia earned his Master of Arts and Master of Fine Arts from the University of Dallas.

Kind Regards,

Art Garcia, MA, MFA
Lead Artist, President
Graphic Content, Inc.

Concept: The working concept of the artwork is to honor firefighters, specifically those of who have made contributions to the Denton Fire Department. This proposal seeks to showcase seven watering pools in the park-like setting at Fire Station #6, allowing individuals to reflect in a 70' path of river aggregate along the fire station. These 10' to 12' tall pool shape objects are made of steel and lucite.

Description: The installation utilizes seven objects created in custom metal and lucite providing low maintenance composites. The top water feature is laser cut metal and lucite. Fabricated in metal with a custom anchor system approved by a Texas Certified structural engineer and mounted on a concrete base. The individual objects are powder coated in hues reflecting water in cool blue hues. At dusk blue flood lighting will illuminate the sculpture surfaces. When on call, each sculpture will alternate white and blue traveling through the row of seven until the firefighters return from the call. While durable, the artwork will also be easily reproduced and repaired in an event of damage due to outside forces. The artwork is viewable from any direction at a location previously identified by the city to consider artwork placement.

The design process is typically completed in three phases: design, fabrication and installation. Design phase considers all aspects of the sculptures aesthetic approach as it relates to the public art realm. The fabrication phase will overlap the design phase in consideration of anchoring, fastening and welding in addition to the application of pigment. In this case, powder coating for durability. Installation occurs with two to three site visits to confirm the proper footings or pads are accurately prepared to accommodate the sculpture(s). Installation may occur with an a crew of 3 or 5 or outside contractor. Art Garcia is involved in every aspect of these phases. There is no additional personnel identified at this time, as the objects are custom built. Personnel will be selected that are best suited for their craftsmanship, timeline and task at hand with a suitable subcontractor(s).

A successful consultant, Art Garcia's quality control and quality assurance is evident in past projects. All work is carefully cross referenced with the engineer's drawings and plans originally created by Art Garcia, modified and finally stamped by a Texas Certified engineer. If at any given point during fabrication the work requires altering the engineer will be notified for final approval, re-stamped and certified if required. Garcia sculptures are completed to specification. An expertise of the artist's characteristics.

Reflection Pool

Sculptural fountains adorn the park-like space with a 70' path of river aggregate providing visitors a time to reflect while honoring our first responders.

Reflection Pool

During evening hours the metal and lucite objects provide a calming display of light with soft changes of blue to white light during first responder calls. When responders return the lights remain blue.

Reflection Pool

The installation utilizes seven objects created in custom metal and lucite. While durable, the artwork will also be easily reproduced and repaired in an event of damage due to outside forces.

Budget Outline

The artwork will utilize metal, plasma cut, powder coating. Properly constructed, the installation will require very little maintenance, though its appearance can be preserved, and the lifetime of the coating extended by periodic cleaning and waxing.

Project Coordination	Schedule	Fee
Artist's fee		
Preliminary design (artist's fee in preliminary design contract TBD)		\$ 5,000.00
Final design (artist's fee in final design/commission contract TBD)		\$ 5,000.00
Consultants/Other People-Related Costs		
Engineering (structural)	60 days	\$ 10,000.00
Photographer	3 days	\$ 2,000.00
Computer art preparation,	60 days	\$ 7,000.00
Model, digital maquette	20 days	\$ 5,000.00
Fabrication	120 days	\$ 25,000.00
Transportation		
Travel	3 days	\$ 1,000.00
Shipping of materials to fabrication site	15 days	\$ 6,000.00
Shipping of artwork to installation site	5 days	\$ 3,000.00
Materials		
Metal	8 days	\$ 20,000.00
Fasteners and anchors	10 days	\$ 2,400.00
Painting/powder coating	30 days	\$ 20,000.00
Site Preparation		
Site survey/meetings	5 days	\$ 3,000.00
Installation Labor/Equipment	20 days	\$ 30,000.00
Rentals (lifts, special equipment/materials, studio supplies, etc.)	3 days	\$ 6,000.00
Permits	10 days	\$ 2,000.00
Installation Labor	5 days	\$ 23,000.00
Insurance Coverage		
Loss/theft/damage (supplies and fabrication parts prior to shipping and during shipping-inland marine)		\$ 1,000.00
General liability (self, subcontractors, assistants)		\$ 600.00
Workers' compensation for assistants		\$ 1,000.00
Automobile and any special insurance riders		\$ 2,000.00
Contingency (10%)		\$ 20,000.00
Total Budget	377 days	\$ 200,000.00

Art Garcia, Graphic Content, Inc. agrees to the scope of work and budget of \$200,000. Acknowledges and agrees to comply with all applicable federal, state and local laws, regulations and grant requirements associated with NEA funding.

The estimated completion date of 10/2026 is achievable. An additional six-month contingency is an adequate timeframe for undetermined factors like weather, material availability, engineering, construction, and city permit approvals.

13 Jenn Garrett
Newberry, FL
Total Cost: \$100,000

Artists Statement

As a public artist, I create sculptural installations that are rooted in place, shaped by community, and driven by narrative. My work engages themes of identity, resilience, and public service, often honoring the quiet heroism embedded in the everyday fabric of civic life. Through scale, material, and interaction, I aim to create artworks that resonate deeply—transforming public space into landmarks of meaning and memory.

Over the past 15 years, I have had the privilege of developing major public works across Florida and beyond, including pieces that celebrate first responders and the spaces they safeguard. My illuminated sculpture for Gainesville Fire Station 1, for example, honors the bravery and commitment of firefighters with a billboard-sized, light-responsive installation that has become a cherished part of the community. Its importance was affirmed when, during the construction of a new facility, the community insisted the artwork be relocated and preserved—an acknowledgment of the sculpture's emotional and cultural impact. I have also created pieces like the Young Pine Park sculpture in Orange County, commemorating the opening of the county's first inclusive playground, and reinforcing themes of access, empathy, and unity.

In developing works for fire stations and civic sites, I am particularly drawn to themes of heroism, selflessness, and the rich, often underrecognized histories of firefighting in Texas and across the United States. I see these projects as opportunities to both honor service and spark curiosity—to create spaces where the public can reflect on the human stories behind the sirens. My proposed work for Denton may include a responsive lighting component that is activated during emergency calls at the fire station, creating a visible, poetic gesture that links the physical sculpture with the living actions of those it honors. This approach—merging symbolism with interactivity—underscores my larger philosophy as a public artist: that art should not be passive. It should respond, engage, and bear witness. There is even opportunity to model the figure shown after a person of your choosing. For a city like Denton, with its forward-thinking approach to public art and its commitment to civic storytelling, I envision a permanent, iconic installation that is both visually powerful and emotionally resonant. A piece that honors the past, reflects the present, and stands as a beacon of shared values—community, courage, and care. Public art is most powerful when it becomes part of a city's rhythm, identity, and story. With this work, I aim to create a sculpture that is not just seen—but felt—by generations to come.

Jenn Garrett

sketches/renderings

Sculpture can be mounted to wall or designed to be installed on posts adjacent to wall.

Orange County Arts &
Cultural Affairs

14. Jennifer Troice
Dallas, TX
Total Cost: \$177,000

LETTER OF INTEREST

JENNIFER TROICE

Dear Selection Committee Members,

I'm excited about the chance to design a monument honoring our brave firefighters and their selfless sacrifice for the Denton Community. This opportunity feels perfectly aligned with my artistic language, creative energy, and passion for sculpting meaningful, community-centered public art.

WHY ME?

I'm Jennifer Troice, a bronze sculptor with a gift for creating emotional connections through clean, modern forms. My substantial body of work includes multiple monumental sculptures.

My outdoor monumental sculptures, dating back to 2014, remain beautiful and timeless. Bronze is weather-resistant, requiring minimal maintenance. Safety is implicit in this format - size, weight, and strength. Installations are anchored with underground structures and cement, guaranteeing they won't fall over even if climbed on.

Working with board representatives, community, and business leaders is not new to me. I thoroughly enjoy the collaboration, from project launch to final installation. My life experience makes me particularly adept at listening, understanding, and incorporating input.

RELEVANT EXPERIENCE

To date, I have completed 14 public and private life-size bronze sculptures, including custom, site-specific, and community-responsive works.

I was commissioned to create THE VERACRUZ COLLECTION, an eight-sculpture series for a public park. The theme was celebrating human connection. The idea is that spending time on devices pulls us apart, while being outdoors playing brings us closer. One monument shows two figures playing jacks, together and fully present (JACKS). Another depicts a seesaw with an empty seat. Visitors frequently interact and play with the bronze child, and lots of photos are taken (SEESAW).

Each sculpture explores human relationships—friends, family, neighbors—all interacting outdoors, face-to-face. It's a reminder of the beauty in real connection, without screens in between. It was important to me that the sculptures be visibly and physically enjoyed.

Likewise, I've also designed, sculpted and installed a 10 ft. tall sculpture of a tree (TREE OF LIFE) weighing over 1 ton giving me the experience of installing large sculptures using a crane.

DESIGN & IMPLEMENTATION OF THE WORK

At project launch, I gather insight to ensure a full understanding of the vision.

Second, I create a small 3-D format model of the proposed sculpture to enable suggestions or changes before crafting the full-scale sculpture.

Once the design is finalized, I begin site construction planning with my team.

I can't wait to learn more about your dream sculpture and am excited to bring it to life! I am available for meetings and to work within the budgetary and time constraints proposed. I hope my extensive experience, creativity, and ability to respond to unforeseen bumps give you the peace of mind that the outcome we create will be exceptional.

Warm regards,

Jennifer Troice
Jennifer

DESIGN PROPOSAL

I envision a bronze sculpture of 2 firefighters responding to a call. The water coming out of the hose is composed of a glass piece created by Carlyn Ray (Dallas glass artist) and will light up whenever the fire alarm goes off. The base is a representation of the cement foundation and can be adjusted in shape, size and/or material.

*I'm happy to modify the design if this isn't what you envisioned.

#	Product or service	Description	Qty	Rate	Amount
1.	Artist Fees	Proposal, Design, Creation and Project Management, Gas for traveling to and from the foundry as well as the job site. This also covers any unforeseen expenses.	1	\$35,000.00	\$35,000.00
2.	Digital Design and Print	Design of 3D hollow large scale model in castable material and shipment to foundry	1	\$30,000.00	\$30,000.00
3.	Bronze Casting	Bronze Casting, Stainless Steel Structure, Welding, etc.	1	\$78,000.00	\$78,000.00
4.	Glass & Electrical Component	Design, Engineering and Creation of the glass water sculpture that exits the water hose and will turn on when the alarm goes off at the station.	1	\$20,000.00	\$20,000.00
5.	Installation	Staff, Transportation of Artwork & Equipment	1	\$14,000.00	\$14,000.00
Total					\$177,000.00

Denton, TX
Total Cost: \$2,000

SAFETY MOVES - PUBLIC ART PROPOSAL

Fire Station #6 Teasley Ln, Denton TX

CONCEPT PROPOSAL:

SAFETY MOVES is a public art proposal for the City of Denton at Fire Station #6 located on Teasley Lane. Made up of multiple stacked spinning signs, *Safety Moves* is inspired from the patterns in safety symbols and roadways. The artworks engage with the wind, each layer of signs turn individually on ball bearings acting like a windmill.

Installed in a cluster near the Fire Station #6 on Teasley Lane, *Safety Moves* references the symbolism of safety symbols and the heroic work of firefighters and safety personnel. The installation seeks to create a space that inspires visitors and commuters to reconsider our contemporary urban landscape, street markings, and safety symbols. My intent is that visitors are drawn to walk through and around *Safety Moves*, feeling inspired to navigate around or through road signs and consider how they direct our movement. Presented at a smaller scale, the spinning signs allow participants to experience urban space from a different vantage point and hopefully inspire creative physical interactions. The installation seeks to engage pedestrians and drivers to reconsider the everyday landscape traversed on their commutes through and on roads.

Safety Moves is visually engaging during the day as well as at night. The reflective surfaces of the signs interact with light at night from passing vehicles and on site lighting. Headlights from

passing vehicles on both roadways will engage with the reflective sign material to create visually interesting movement and interaction. A new addition to the installation will be electrical components including flashing sirens lights that flash when the fire alarm is activated.

This proposal includes modification and addition to an existing public artwork commissioned by the Rose Kennedy Greenway Conservancy in Boston, MA. Originally titled, “No Direction,” this public artwork was commissioned in 2018 and installed for a temporary public art exhibition in the Greenway Conservancy from June to November, 2018. The work was commissioned for “The Auto Show” which was curated by Lucas Cowan to commemorate the park’s 10 year anniversary as an outcome of a major urban infrastructure project. As the work was commissioned to be installed for only six months, after the duration of the show the artwork became my property with the Greenway Conservancy holding no rights over the work. The artwork has been in storage since 2019. It will need minor alterations to be updated for installation but the preparation of the site and installation to ensure safety will be the greatest expense. Replacing the vinyl sign material with longer lasting vinyl will be the focus of updating the work for permanent installation. The original vinyl sign material was estimated to last 10 years in full UV exposure. The work has been in climate controlled storage for 5 years but as replacing the vinyl will be part of the work’s long term maintenance and conservation plan, installing it with new vinyl will ensure a consistent conservation.

Centrally installed in *Safety Moves* are spinning signs that engage the passive wind energy to move the blades of the signs like a windmill. The layers of signs resemble a totem and reference the complex sign posts familiar from Dr. Seuss or the Wizard of Oz. The stacked signs each have bisected four sides like blades of a propeller to catch the wind. Each layer moves independently on rotating cuffs. The signs utilize basic road sign shapes and colors but remain blank from marking or content so as not to be confused with road signs located in the vicinity. The surface of the signs are covered in reflective vinyl which engages with car and street lights at night and as the sign moves with the wind.

Figure 1: Original installation on the Rose Kennedy Greenway Conservancy, June to November 2019

Figure 2: Alternate perspective of original installation

PRELIMINAREY BUDGET:

Materials

Existing Sculptural components (5 signs)	\$25,000
4" Structural Steel Pipe	\$1,000
Aluminum sheets	\$1,000
Replacement Vinyl	\$5,000
Siren Electrical Components	\$1,000

Labor

Engineering fees	\$7,000
Electrical contractor	\$5,000
Production, in-studio (vinyl replacement)	\$2,000
Fabrication offsite (siren housing)	\$5,000
Powder Coating	\$1,000

Installation

Sign Installation	\$2,500
Electrical Installation	\$5,000
Cherry Picker rental (3 days)	\$5,000
Transportation to site	\$500

Site Preparation

Concrete Pads	\$30,000
Landscaping	\$5,000
	\$35,000

Additional Expenses

Insurance	\$2,500
Contingency costs	\$10,000
Artist Fee	\$10,000

TOTAL ESTIMATED BUDGET	\$158,500

Julie Libersat

Artist Statement

julielibersat.com

I use navigation and orientation as both metaphor and process in order to examine our relationship with the built environment. I question my own relationship to place and belonging through the lens of "getting lost," which allows me to highlight the ways that public and private spaces direct orientation and inform our cultural values. Our cities, neighborhoods, and buildings reflect our personal, cultural, and political histories and imaginaries. Individually, places hold great meaning: we occupy places within our memories, dreams and imagination. I strive to make immersive, interactive, and participatory environments that engage viewers and compel them to observe ways in which space is socially and culturally produced.

Through digitally fabricated sculptures, installations, videos, and interactive technology, I explore patterns and symbols within the visual culture of transportation to reveal the politics of space. *No Direction* explores infrastructure history is a public artwork commissioned by the Greenway Conservancy, a 1.5-mile rooftop public park above Boston's Central Artery Expressway. To commemorate the 10-year anniversary of the Big Dig, my temporary public artwork titled, *No Direction* included five kinetic sculptures that referenced common street signs and the history of the park's construction. Each sculpture spins when activated by the wind and reflects the lights of vehicles' headlights at night.

As a visual artist, art /design educator, and scholar in the field of art education, my creative research, scholarship, and service often merge boundaries and feed into each other. My studio practice is rooted in an ongoing investigation of our relationship with the built environment: how we design, navigate, represent, and live within architecture and infrastructure. My research and writing explore our relationship and orientations within public space. A recent article titled, *The Great Highway Robbery: Texas Highways and Historic Freedmen Towns*, traces the history of urban renewal projects and their pattern of destruction through historic Black neighborhoods. I recently collaborated on a co-authored book chapter titled "Libretto in Four Acts: Tactics for Art Walking in Public Spaces," which questions if all bodies have agency and are, in fact, safe in public space, using the lenses of intersectional feminist and disabilities studies. In 2021, I served as co-PI on a National Endowment for Humanities grant project *Quakertown Stories*, which is an interdisciplinary curricular initiative that integrated the history of Quakertown, a historic Black community in Denton, into courses across TWU. In order to grapple with our own institution's complicit role in the neighborhood's

forced removal and dissolution, we worked with an interdisciplinary group of faculty fellows to create curriculum and reflect on best practices for social justice learning and arts and place-based research. We worked with students in our classes and connected with descendants of Quakertown residents, community members, and historians through programming and oral history projects.

BIO

Julie Libersat is a new media artist and associate professor of art, design, and technology at Texas Woman's University. She has a BFA from the Maryland Institute College of Art (2003), an MFA in New Media (2016) and a MA in Art Education (2017), both from the University of North Texas. Libersat has exhibited artwork in the US and abroad including shows at the Dallas Contemporary Museum, Texas Vignette, Currents International New Media Festival, Paseo Taos, and Museo de la Ciudad de México. She has received a Maryland State Arts Council Individual Artist Grant, the 2014 CADD FUNd grant, and the Velma and Davis Dozier Travel Grant from the Dallas Museum of Art. She served as a co-PI on a Humanities Connections grant from the National Endowment for Humanities in 2021-22.

16. Katherine KT Taylor
Houston, TX
Total Cost: \$152,100

Dear Members of the Selection Committee,

I am thrilled to submit my letter of interest for the City of Denton's Fire Station #6 Public Art opportunity. As a metal sculptor with over 20 years of experience creating large-scale, permanent outdoor artworks, I am eager to propose a vibrant, iconic sculpture that honors the courage and dedication of Denton's firefighters and their enduring legacy of service to the community.

For this project, I envision a dynamic, larger-than-life sculpture featuring a horse and a Dalmatian, crafted in durable, weather-resistant metal. This concept pays homage to the historical role of horses in pulling fire carriages and Dalmatians in alerting communities and calming horses during emergencies. The horse would be depicted standing calmly, its head lowered to nearly touch noses with the Dalmatian, which gazes up with alertness and loyalty, capturing the deep bond of true friendship between them. To enhance visual impact, I would employ my signature "texture swapping" technique, integrating tactile surfaces inspired by firefighting gear—such as the weave of hoses or the grain of leather—alongside natural textures found in the Denton area.

Designed for durability in Denton's climate, the sculpture would use low-maintenance materials like stainless steel or bronze, ensuring longevity and safety. The piece would serve as a landmark that delights residents and visitors, embodying the spirit of community resilience and the vital role of the fire station. The proposed budget cover all

costs, including design, engineering, materials, fabrication, site modifications, and installation.

My recent projects demonstrate my ability to deliver impactful public art within budget and timeline constraints. I completed The Lion Family, a bronze sculpture for Easton Park in Austin, TX, and am currently fabricating a 13-foot stainless steel falcon for the University of Texas Permian Basin. These works reflect my expertise in creating enduring, site-specific art that resonates with communities. I am prepared to work closely with Denton's team, local engineers, and fabricators to ensure seamless integration and compliance with all project requirements.

you for considering my proposal. I am excited about the opportunity to contribute to Denton's artistic legacy and look forward to the possibility of further developing this concept.

Sincerely,

KT

Katherine 'KT' Taylor

Total Cost: \$200,000

As an artist whose practice is rooted in creating meaningful, large-scale public art that elevates community identity and celebrates public service, I am honored to submit a proposal for the City of Denton's Fire Station #6 public art initiative. This project presents a powerful opportunity to honor the bravery, service, and humanity of Denton's firefighters while contributing to a bold new era in the city's public art legacy.

My multidisciplinary public art practice is built on themes of empowerment, remembrance, and connectivity. I create immersive sculptures and installations that not only reflect the character of a site but invite community interaction and emotional resonance. With over 15 years of experience in producing impactful artworks for municipalities across the country—including Chicago, Memphis, and Grand Rapids—I understand how to deliver ambitious projects that are structurally sound, community-centered, and built to endure.

This particular commission, supported by Denton's historic 2023 Bond Program, represents more than a public art installation—it symbolizes a civic investment in the cultural fabric of the city. My artistic approach is well-suited to this charge. My works such as ASPIRE, a 25-foot monument in Chicago's Englewood neighborhood, and The Path Forward, an 80-foot aluminum and steel installation at the University of Illinois, exemplify my commitment to creating "iconic placemaking" pieces that are tailored to their environment and community values.

For Fire Station #6, I envision a visually striking installation that both honors the legacy and spirit of first responders and instills a sense of pride and reflection in the surrounding community. I plan to engage closely with city officials, fire station personnel, and residents to ensure that the final artwork is rooted in local identity while serving as a beacon of inspiration and public gratitude.

My technical process includes the use of CAD modeling for 3D design and coordination with structural engineers, fabricators, and municipal stakeholders. This ensures that the artwork meets all safety, budgetary, and environmental requirements—especially important for outdoor, permanent installations exposed to Texas weather conditions.

Public art is a tool for unification and storytelling. With this project, I aim to craft a work that reflects Denton's values—courage, community, and forward-thinking leadership—and contributes to the city's evolving artistic landscape with enduring power and purpose.

Maxwell E. 2025

Proposed Budget for City of Denton Fire Station #5 Public Art Project

Total Project Budget: \$200,000

Category	Details	Amount (USD)	% of Total
1. Administrative Costs	Insurance, project management, travel	\$10,000	5%
2. Artist Fees	Creative concept development, design work	\$30,000	15%
3. Pre-Fabrication	Engineering, modeling, shop drawings	\$24,000	12%
4. Fabrication	Materials & parts, shipping, fabricators, studio rental	\$76,000	38%
5. Installation	Site prep (concrete, trades), install labor & equipment	\$30,000	15%
6. Concrete Fabrication & Install	Specialized base and structural foundation	\$25,000	12.5%
7. Contingency	Design modifications, material increases, inflation buffer	\$15,000	7.5%
TOTAL		\$200,000	100%

Boise, ID
Total Cost: \$200,000

Letter of Interest

Each public art project has its own potential, and my approach is to create a new design for each opportunity. I am a sculptor based in Boise who specializes in creating enduring works from metal. For over 25 years I have been sculpting contemporary works that combine clean, flowing lines with unexpected details. My fabrication skill set serves not only my own art but allows me the opportunity to collaborate with artists of other disciplines to design and create unique works. Regionally I have collaborated with many Boise artists on several recent projects and have worked with the nationally renowned sculptor Arthur Higgins. Some of my recent notable works are *Circuitree* for Greeley, CO; *Transference* for Boise State University; a multiple sculpture design and installation for The City of Bend, OR; an entryway sculpture for the Inn at 500 in Boise, ID; *24/7* and *Call and Respond* for Fire Stations #4 and #8 in Boise, ID; a kinetic sculpture powered by the wind for Heroes Park in Meridian, ID; an iconic free-standing sculpture *Spiral of Injustice* at the Idaho Anne Frank Human Rights Memorial in Boise, ID; a kinetic sculpture representing a historic park and its relationship with the surrounding community throughout time for Munson Park in Norfolk, VA; *A New Leaf* for Bates Technical College in Tacoma, WA; a placemaking sculpture, *Pillars of the Community*, at Fire Station No. 36 in El Paso, TX; *Ambassador's Portal* at Don and Anne Davis Park in Newport, OR; a multi sculptural bench installation for a senior living center in Broomfield, CO; a roundabout sculpture of a mare and her foal celebrating the spirit of rodeo in Nampa, ID; a didactive piece commemorating the City of Nampa in the heart of downtown in Lloyd Square; an entry way sculpture celebrating community upstanders at the Wassmuth Center for Human Rights in Boise, ID; *Vita Nova* celebrating new life for Rogers Farm neighborhood in Superior, CO; and an entry way metal relief sculpture signifying how individuals in the community make up the local landscape for Monroe Detention Center in Woodland, CA.

Working in primarily metal allows the flexibility to produce both delicate and monumental objects of art that can live in almost any space. The materials I work in most often are aluminum and stainless steel which are extremely versatile for lasting outdoor installations. The meticulous construction methods that my studio employs often give a seamless quality to the art to emphasize the elegant lines of the design. Color is used carefully to enliven the space and I often incorporate other materials in the work as important details. Recent pieces have utilized gilding, mosaic, acrylic and specialized finishes to enhance the design.

Because I work from the template of an original artisan, commissioning agencies get the advantage of outstanding service that often gets lost in the vastness of many art corporations; I personally answer all of my own phone calls and emails, design all of my own artworks, fabricate all of my own designs, and work directly with the architects, contractors, engineers, neighborhood associations and city planners in a team effort. In addition, fabricating my own designs gives me the experience needed to propose designs that are feasible for the determined budget, as well as the advantage of being in better control of meeting timelines and staying within that budget as I don't have the cost of hiring someone else to build my artworks. The resulting art is a combination of artistic vision, solid craftsmanship, and careful integration of the piece in the natural setting.

I am confident in my abilities to design, fabricate and install unique artwork for The City of Denton's Fire Station 6. The skills needed to do so; meticulous craftsmanship, solid fabrication, and practical experience with permanent materials; are skills that I have been employing on many individual installations internationally. This is an exciting opportunity to create artwork that captures the essence of the community to engage, uplift and provoke thought in those who interact with it. I believe that my own artistic vision united with years of professional design, fabrication, and collaborative working experience contribute to give me extensive knowledge of working on artwork as well as combine to make me a unique candidate.

Thank you for your consideration,
Ken McCall

Proposal

Paying tribute to firefighters' courage, *Heroes Gateway* represents the idea of Fire Station 5 being a space that assists the men and women it houses to prepare for their valorous community service; a space that helps transform heroes.

Maps of the area the fire station serves are engraved into the pillars while the station's emblem is displayed on the top, representing the relationship between the two.

Waves are used to represent the beach location of Fire Station 5 as well as signify the importance of water; the universal symbol of life and the vital resource used by the firefighters to protect it.

Blue lights will light up *Heroes Gateway*, which will turn to red to signal the station's calls.

Heroes Gateway will stand approximately 17.5 feet high, measure about 4 feet by 4 feet at the base and 7 feet by 5 feet at the top.

Budget

Engineering	\$2,000
Insurance	\$500
Permits/Fees	\$1,500

STATEMENT

I strive to create wondrous, welcoming works of art to enhance public spaces and appeal to all ages. I use the phenomena of light as an art medium, creating dynamic interactions that refract light into color. My art reflects my interest in geometry, science, technology, light and color to create luminous, interactive sculptures that welcome the public and uplift the spirits of viewers -- to make the mundane magical.

I've been a working artist for nearly 50 years with more than four decades experience in public art. My designs are site-specific, inspired by the surroundings to create a unique sense of place. I work with durable materials -- laminated safety glass, stainless steel and concrete -- to create long-lasting monumental artworks. Two common design concepts in my work are "beacons" or "lens" structures that act as optical instruments to capture and re-direct light and color projections into the surrounding space to animate the environment.

Working with glass, metals and laminating films, my sculptures are designed to interact with the sun and/or artificial light, projecting and reflecting light and color into the surrounding space, shifting color and transparency and changing appearance with the times of day and degrees of sunlight. I use the phenomena of light as it interacts with the optics of glass as an art medium, creating dynamic interactions with light, refracting it into colors -- rainbow emanations that change as the viewer moves.

I'm an extremely organized, seasoned professional, with a keen sense of organization and project management. I have experience working with teams, enjoy the R & D process and excel at structural details. Most of my projects are done in collaboration with government agencies, community groups, real estate developers, cultural commissions and construction crews. Many of my projects have involved substantial community consultation and public participation plans that range from design charrettes, school presentations for students, lectures, video productions, book publishing and tours. Public art can be a source of pride for a community as it adds beauty to the landscape. I welcome feedback to my designs -- the process generally improves the final product and generates enthusiasm from the community. I consider this intrinsic to the public art process.

Finally, my art is designed with the highest concern for safety, made from durable materials and are generally maintenance-free and vandalism-proof.

INTRODUCTION & INSPIRATION

I strive to create wondrous, welcoming works of art to enhance public spaces. I use the phenomena of light as an art medium, creating dynamic interactions that refract light into color. My art reflects my interest in geometry, science, technology, light and color to create luminous, interactive sculptures that welcome the public, animate the environment, and uplift the spirits of viewers -- to make the mundane magical.

Over the past five years, I've created a series of what I call Celestial Objects. There are two main categories within these creations: dichroic glass-clad dodecahedrons and spherical structures enmeshed with laminated dichroic glass discs and a smaller stainless dodecahedron star within them. Inspired by Buckminster Fuller's 'Bucky Balls', these geodesic structures not only reflect a purity of geometry inherent to the natural world but are also considered by engineers to be the most durable structural building block available to us.

For the Denton Fire Stations' RFPs, I am proposing two luminous, cosmic sculptures:

G – STAR and G – SPHERE

Both are inspired by the concept of a "Beacon," from the old English verb "to beckon to come" and a "Lighthouse" that guides and helps navigate waterways through the darkness. They are distinct, but aesthetically-related, sculptures, I am offering both versions to both Fire Station #5 and Station #6 to select one.

These free-standing geometric sculptures are fabricated and ready for installation. Made with laminated dichroic glass elements designed to interact with light to dynamically change colors depending on the angle of light and the movement of the viewer in space, the Denton Beacon(s) will be a strong and glowing visual landmark, as well as an iconographic symbol for the community. The Beacons will be visible to passers-by and from a distance to fully experience the changing colors, light projections/reflections and shadows.

The Beacons will be illuminated at night by a solar powered LED light fixture hidden within the sculpture's base. I could install programable lighting that could b

LETTER, Denton Fire Station #6 Public Art Opportunity

As a public artist for over twenty years, I have a wealth of capital project experience developing site-relevant public art for civic entities. I have a strong command of the skills, industry-relevant protocols, and criteria that result in beautiful, durable, dynamic public art. I am based in Mid-Coast Maine and my public art can be found in all corners of the country, California, and Alaska. I am adept at the design, fabrication, transport, and installation of significant public works. As both designer and fabricator, I am able to deliver art that is more than the sum of its part. My ability to innovate process and employ sophisticated construction techniques allows me to create monumental work within an economy of construction. I bring practical, industry-standard solutions within the envelope of lyrical, beautiful art.

My public art practice is a confluence of design, vision, materials, and mission that encourage discussion and elevate the public realm. I have experience incorporating representational theme, signage, wayfinding elements, seating, and lighting in my public art and will work with you to include any of these nuanced solutions to the Fire Station #6 Opportunity. My portfolio underscores the scope of my versatility. I am nimble mixing and matching process, material, and styles to achieve signature, targeted public art; every project is curated to suit its' site and regional cultural narrative. Though I have a wide array of compositions, the unifying attributes in my art are: Museum-caliber craftsmanship; innovative fabrication; durable, beautiful materials; and lyrical, dynamic, implied motion. My commissions nest harmoniously in their site, serve as visual stepping stones, and interact/respond to natural light; these interactive qualities endow the art to function as a living canvas, inspiring by day, night, and from season to season. The confluence of forms, ever-changing optics, and precise geometries imbue every Palmiter sculpture with universal appeal to a diverse audience. These attributes are a fit to achieve your art goals.

I design with an eye towards the "in between"; that is, not only the art, but the negative spaces created by the art, add nuance to my commissions. I seek to create sculpture that is beautiful from any angle, in harmony with the surrounding landscape, and regionally relevant to celebrate local community. Given your targeted criteria, I am interested develop one signature sculpture that is uplifting and has an interactive light element when Firefighters are called upon; additionally, I can reserve budget to include a more representational wall art feature along the Station facade you identified for possible art. The Art Suite I develop will honor the dedication of Denton Firefighters and Safety Workers, provide an uplifting landmark for the City, and serve as a welcoming feature for residents and visitors. This signature Art Suite will provide critical way-finding, punctuate the processional experience, and serve as a memorable Station ambassador. I am qualified and interested to collaborate with Stakeholders to refine this concept; together we will set an uplifting tenor that celebrates public safety workers, your history, heritage, and the livability of Denton.

The materials I use are stainless steel, bronze, stone, glass, formed metals, acrylics, etched glass, and marine grade paint. These materials remain beautiful under the rigors of harsh UV exposure, wind, rain, freeze/thaw, and pollution; these are responsible material choices which resistant vandalism. I have experience in the modalities of architecture, engineering, construction, rigging, and other technical systems which enable me to analyze and execute rigorous design solutions while transitioning between technical and artistic disciplines.

The public art I create is akin to a cultural bridge bringing people together through a shared aesthetic experience. Sculptors view their world as a canvas. We seek out ever larger expanses to enliven; humanity benefits from these art experiences. It is a privilege that my life's work allows me to enhance civic spaces for many; whether developing work for a university, a hospital, a transit facility, or a City, I am honored to participate in this endeavor. I appreciate your review and thank you for participating in the public art process.

To Whom It May Concern,

As a multi-disciplinary artist, I utilize form, scale, and light to explore the intersection of personal identity, cultural convergence, and self-determination. My works contemplate the complexity of shared heritage and regional culture, and how those influences shape our individual aspirations and community dynamics. Central to my practice is a social engagement process with a strong emphasis on inclusion and representation. I collaborate with communities to create artworks that reflect both personal narratives and collective experiences—producing site-specific installations that serve as dynamic, multicultural labyrinths containing layers of context and detail.

My public works are studies of the perpetual duality of our natural state, they are representations of the friction and equilibrium between individuality and community, creativity and tradition, aspiration and humility. My process involves reconstructing natural objects, landscapes, and architectural elements, and infusing them with public-sourced materials and information, visual narratives, abstract elements, and figurative images.

I have extensive experience collaborating with city agencies, landscape architects, general contractors, engineers, and fabricators to deliver projects from concept to installation. My public artworks have been commissioned to serve as gateway markers, placemaking, functional seating and play elements, and points of cultural resonance. My works including *SWA*, *Bloom*, *Blossom*, *Endeavor*, *Cloud Field*, and *New Dawn* demonstrate my ability to design and deliver large-scale, dynamic, and durable installations that are responsive to context and grounded in community dialogue.

My intent is to create a site-specific work that fulfills the project's mission, activates Fire Station #6 with a dynamic and immersive three dimensional work, and reflects the cultural heritage and themes representative of City of Denton. My concept for your project would also incorporate papercut art inspired perforations, which is recurring motif in my works. Public engagement will be essential in developing and finalizing elements of the final design of the perforations. As I have done for my completed public works *SWA*, *Bloom*, *Blossom*, *Endeavor*, *Cloud Field*, and *New Dawn*, I would organize a holistic program of community events, townhall style meetings, and papercut workshops. A key component of the workshops will be to solicit from the community their responses to a curated list of questions related to the project's theme, which I will then translate visually into figurative images and patterns through the perforations. Additionally, participants will have the opportunity to create their own papercut designs during the workshops, so that they can potentially be incorporated into the final design of the artwork. A designated website would serve as a platform for the public to submit their ideas and designs throughout the community engagement phase. This direct community participation and contribution to the development of the artwork ensures it is representative and site-specific. The project becomes more than an artistic composition, it is a collection of personal and communal ideas, narratives, and memories, and is the culmination of a community movement.

I welcome and hope for the opportunity to present and expand further on my concept for your project, thank you for your time and consideration.

Sincerely,

Sijia Chen

Total	\$190,000

22. Sonarta LLC / Shahla Rahimi Reynolds & Cyrus Reynolds
Reseda, CA
Total Cost: \$181,000

INTRODUCTION

- The City of Denton Parks and Recreation Department is seeking proposals for public art for permanent installation at site of **Fire Station #6** at **2301 Hunter's Creek Road, Denton, TX**. The Proposals provided by artist should include designs for a permanent outdoor art installation, of significant scale and impact, to be located at the site of **Fire Station #6**. Proposals should provide an iconic, place-making art project that showcases Denton's commitment to being in the vanguard of municipalities that support public art.
- **Goals:**
- The City is seeking sculptural art installations that speak to the themes of: **Heroism, selflessness, and the varied histories of firefighting in Texas and the United States**. The proposal may also include an active lighting component that responds to activation of an emergency call at the Fire Station.

CONCEPT NARRATIVE/ARTIST STATEMENT

- As the alarm rings, another day on the job begins. To anyone else the alarm would be a cause for panic, but to a firefighter it is a signal to go forth and serve the people they've sworn to protect. Springing into action to save lives, property, and the community they serve are all key aspects that define a firefighter's training.
- For a firefighter, being ready when a call comes in is an immensely important part of the job. Every part of the uniform, from the helmet all the way down to the boots, needs to be properly equipped and secured at a moment's notice often throughout a regular shift.
- This sculpture highlights that key part of a firefighter's routine. The figure exemplifies a focused and trained energy, showcasing their experience and how much the process has become second nature to them. Much like how the average person prepares to go to work, so too must a firefighter prepare themselves for the challenges and risks that come with serving and helping the public on the many calls they respond to.

Artist Statement

I have previously completed successful projects in the public realm, ranging from public parks, through botanic gardens, to large shopping malls. I am especially fascinated by the floral patterns, such as constructions of flowers and plants and the topic of transplanting floral motifs from micro to macro scale.

The defining aspect of my art is its ability to transform itself at dusk and present the nature transposed from a micro to macro scale through use of biomimicry. My series of sculptures created for parks and gardens were also based on naturalistic design principles and were designed to amplify the effects of natural light.

When the sun sets, the dynamic illumination systems built in my sculptures let them undergo a complete metamorphosis, completely changing their character. It's a great feature in dynamic public places, where a lot of people walk. As my Bubble Forest in Nice, France proved, my art also serves as perfect landmarks that make navigation in the area easier. It also works interactively, as an attractive selfie spot.

In my past projects, I have successfully collaborated with managers and general constructors of large buildings, consulting professionals and several fabricators. Some projects I have done include coordinating with civic professionals on the municipal level. My artworks are engaging pieces that carefully fit, without necessarily seeming so, into their spaces by using a creative logic.

I usually hire local companies to prepare concrete foundations and electric infrastructure for my sculptures.

Most importantly, I believe that it is key for public art projects to create meeting spots, gathering places. I always design my sculptures to be attractive selfie spots and recognizable landmarks, so they serve a very practical purpose of defining the space around them and building a sense of ownership in the community. This way, they become local attractions and are used by the people in everyday life and conversations. "Let's meet at the Bubble Forest" or "Let's meet at the Dandelions" are phrases commonly used in Nice, France or Kirkland, Wa.

Best regards,
Mirek Struzik

Proposed Design

The Timeless Firefighter

A sculpture proposal by Mirek Struzik

For the Fire Station #6 project in Denton, I'd like to propose the *Timeless Firefighter* - a sculpture that depicts heroism incarnated: St. Florian, the saint patron of firefighters. This inspiration dates back to the 3rd century AD and is universally associated with heroism, courage, loyalty and selflessness. Above him arcs a dynamic stream of water, symbolizing his legendary ability to save whole towns from fire with just a single jug of water. He's a legendary ideal, so it seems a good fit as both a spiritual guardian for those who serve and a memorial of those who sacrificed their lives saving others.

In the evening the sculpture would be uplit and the shadows cast on the wall by the arc would symbolize dangerous elements against which he protects us.

Materials

Synthetic stone, electropolished stainless steel, lamps

Detailed budget breakdown

The budget includes: design, fabrication, delivery to port chosen by the Client, installation on site

The budget does not include: transport from port to the installation site, preparing the foundation with secured power line for lamps and slots for the lamps, paving the area under the sculpture (as shown in design visualizations)

Materials:	\$20 000,00
Engineering:	\$5 000,00
Artist fee:	\$40 000,00
Fabrication:	\$120 000,00
Deliver to port:	\$7 000,00
Installation:	\$8 000,00
Total budget:	\$200 000,00

24. Studiofolia/James Dinh
Cerritos, CA
Total Cost: \$175,000

Dear Selection Committee:

It is an honor to submit my interest and preliminary design concept for the Denton Fire Station public art project. Based in Los Angeles County, I founded the collaborative design practice Studiofolia in 2014 with the simple mission of designing public art spaces that connect people to memory and place. Because the context and requirements of each project are different, my design process is based on an *approach* rather than a singular style or medium. This focus on site-specificity is reflected in the diversity of my built projects in different communities across the country. Each project tells a story that is unique to its place.

I am drawn to the Denton Fire Station public art project because I believe the selfless service of firefighters and first responders should be honored and recognized. Having completed large-scale, community-centered artworks across the country, I believe that my experience working with different stakeholders and engaging diverse communities will make me a strong candidate for this project.

Design Concept: Tower of Service

The tower-like shape of the proposed sculpture is inspired by fire lookout towers, which were once found in cities, but are now mostly seen in wilderness areas. Like the lookout towers, the artwork is intended to be a beacon for the community that recognizes and celebrates the work of fire fighters.

Made of steel panels, the sculpture stands about 16 feet tall and 4 feet wide. Each of the sculpture's four sides contains four medallions of the St. Florian Cross, which is an ancient symbol that represents fire fighting departments around the world. Each side also contains cut-out text of a "core value" of the Denton Fire Department: respect, integrity, courage, and humility.

In the center of each medallion are images of things that are associated with fire fighting, such as axes, hoses, hydrants, extinguishers, etc. The artist will work with the fire station staff to determine the fire-fighting objects that are represented in each circular medallion.

One in-ground LED light can be placed in the middle of the base of the sculpture. Normally lit a red color at night, the light can change to blue when fire fighters respond to emergencies. The sculpture is envisioned to be painted the same iconic red color as fire trucks. A highly durable industrial paint such as Tnemec or Carboline Carbothane can be used.

The design shown in this proposal is intended to be preliminary and conceptual. The artist anticipates that the design will be enriched and evolve with continual feedback from stakeholders. The artist will work with the fire station staff and the city to determine the most visible and appropriate location for the sculpture. Thank you for your consideration

Sincerely,

James Dinh
Studiofolia

DESIGN GOALS

My aim for this project is to create engaging and beautiful piece of sculptural artwork that will captivate the interest of the City of Denton residents for the long-term. This sculpture was designed with 3 primary goals in mind:

Honor and Inspire: To celebrate the heroism of firefighting in Texas and the United States, recognizing not only the bravery and sacrifice of firefighters but also the deep sense of community, resilience, and service they embody. The sculpture seeks to stand as a lasting tribute, inspiring pride and gratitude in all who encounter it.

Dynamic Perspective: The sculpture is designed to be interesting from all angles, allowing for maximum enjoyment to residents, whether they are walking or driving by.

Stylized Representation: The sculptures exist in a playful space between abstraction and representation in order to evoke rather than directly depict.

Nacogdoches, TX
Total Cost: \$200,000

DENTON FIRE STATION #6

THE ESSENCE OF LIFE

Firefighters and water are two essential elements to life and a healthy community.

Water is a crucial resource and primary firefighting agent for firefighters, serving as both a life-saving tool and a potential hazard. It's used to extinguish fires by cooling flammable materials and creating steam that smothers the flames.

This single water drop of water symbolizes the importance of water. Water is the essence of life.

Towering at 12 feet tall with dimensions of 6.5 feet by 6.5 feet, this droplet will symbolize the importance of water. Resting upon a 12- to 24-inch tall concrete base, the sculpture will blend seamlessly into its surroundings, with its final height dictated by the landscape design. The surface may be brushed stainless steel for a sleek, reflective effect or powder-coated in a vibrant hue to further express the warmth and passion firefighters pour into their work. If electricity is available, this tribute can become even more dynamic. Lights embedded within the sculpture could flicker when an emergency call is made—serving as a visible reminder that somewhere, firefighters are rushing toward danger on behalf of others. As the sun sets, internal lighting would illuminate the heart, allowing its presence to shine through the night as a beacon of resilience, heroism, and love for the community. This project isn't just about a structure—it's about capturing the spirit of those who serve, ensuring their sacrifices are forever seen, felt, and honored. Words reflecting those of a firefighter's character will be laser cut out of the metal. These words can be changed to those desired by the committee. The sculpture will be bolted to the concrete base using concrete anchor bolts.

THESE WORDS WILL BE LASER CUT OUT OF 3/8" STAINLESS STEEL

Firefighters charge into danger when others flee, risking everything to save lives.

Courage is not the absence of fear, but the will to act despite it.

Every alarm signals a call to serve, protect, and sacrifice for others.

A firefighter's duty is not just to fight flames, but to safeguard hope.

Strength is measured not in muscle, but in the willingness to face the unknown.

Firefighters stand between chaos and safety, answering the call without hesitation.

The firehouse is more than a workplace—it's a brotherhood built on trust and bravery.

When disaster strikes, firefighters rise, proving that heroism is a choice, not a title.

The greatest reward for a firefighter is a life saved, not recognition earned.

Firefighters don't seek glory; FIREFIGHTERS seek to make a difference in someone's darkest hour.

Every fire fought is a battle won for the community they vow to protect.

The firefighter's creed is simple: serve with honor, act with courage, and never back down.

Firefighters risk everything to protect strangers, proving heroism is a choice.

In the face of disaster, firefighters stand as the last line of hope.

Every rescue is a testament to courage, selflessness, and unwavering determination.

Firefighters don't just fight flames—they fight for lives, communities, and safety.

Total Cost: \$140,400

All Down the Line

Drawing from the life and equipment of firefighters, this piece takes inspiration from actions of the work itself. ***All Down the Line*** presents a vision of common purpose and attention to the detail of the work.

The organizing gesture of the piece is a winding fire hose- a flowing organizing line that moves through space and captures three images within its contours. Like a line moving through space, it creates a dynamic presence that is like a three-dimensional drawing.

Everyday moments found within the life of firefighters are highlighted— equipment within the cubbies of a fire truck, jackets and helmets within the station, a close-up view of hands working a fire hose. These framed views capture the beauty and ethos of this work. The tools, equipment and garb are at once elegant and bold. They portray the precision and finesse demanded of this service, and the collective nature of being a firefighter.

This piece is striking from afar, perhaps a bit mysterious. Upon closer inspection, the images offer another aesthetic experience. We wish for this piece to inspire reflection and admiration for the firefighters and their work.

Materials and Dimension

The area of the piece is about 30'-0" long by 5'-0" deep by 6'-0" high. The hose element is a 3" diameter (ID) aluminum pipe (3 1/2" OD). Each of three aluminum image discs are 1/2" thick with three different diameters (3'-0", 3'-6", and 4'-0"). The discs are to be water-jet cut with solids and voids creating the image. All of the elements are to be powder-coated. The artwork has a four-color palette. To visually separate the sculpture from the foundations, there are four 1'-0" high x 2 1/2" square tubes welded to the sculpture and mortise set in and welded to a base plate. Four engineered concrete point foundations will hold the sculpture. The connection of the four base plates to those foundations will each have four stainless steel threaded rods epoxy-set anchor tie-downs with high security nuts, 16 anchors in total.
