

Declaration of an Emergency

File #: 6330

Requisition #: 132478

Date: 01-06-2017

Vendor: Weaver Consultants Group, LLC

Commodity/Service: Engineering services and installation of an odor control system and extension of the Soil Vapor Extraction (SVE) System

Estimated expenditure for the above commodity or service: \$ \$264,940.00

Initial all entries below that apply to the proposed purchase, under the Purchasing Procedures as passed by City Council. (More than one entry may apply.)

1. X Emergency situations, including procurements necessary to protect the public health or safety or in response to a public calamity;
2. _____ A procurement necessary because of unforeseen damage to public equipment, machinery, or other property;

Brief Description/Justification for exception:

Methane has been detected in monitoring probes GMP-12 and 14 at a concentration exceeding the Texas Commission on Environmental Quality (TCEQ) regulatory threshold stated in TAC 330.371(a)(2). In the case of such an event, the regulated entity is required by TAC 330.371(c) to implement a remediation plan. Weaver Consultants has been contacted to provide a proposal for professional design services and the extension of the existing Soil Vapor Extraction (SVE) System as part of the required remediation plan. The landfill has also experienced an exceedance of permit and regulatory requirements regarding offsite odor parameters for which immediate corrective action is required. In order to maintain permit and regulatory compliance, as well as the health, safety, and welfare of the neighboring residential area, it is necessary to install a permanent odor control system. The work to be performed is considered a Professional Service, given that design services are needed. In accordance with Texas Local Government Code 252.022, the procurement of professional services is exempt from the requirement of competition based selection. Weaver Consultants have been involved in air permitting and reporting for the landfill since 2003. Weaver's knowledge of the site will provide continuity between the current operation and the odor control system without the delay that would be involved by employing a consultant not familiar with the operation.
