Subject: RE: Follow up

Based upon strategic fire station planning models in which unit response time is a primary factor on site location, the Fire department has identified the existing site of Fire Station 3 to reconstruct a new building that will serve the neighborhood for the next 50 plus years.

Due to a need to increase the building size, additional units and equipment for population growth in this area; the Fire department requests permanent closure of McCormick Street from Avenue A to Underwood for the reconstruction project.
